

CAMsil DUO

Product-No.: 100021

Field of application

CAMsil DUO consists of a combination of hetero- and homofermentative lactic acid bacteria.

For rapid pH decrease and improvement of aerobic stability.

- for gras and leguminouse silages
- for silaging green rye and whole crop silages (rye)
- for corn silages with heat damage, corn smut or corn in milk ripeness

Analytical constituents

CAMsil DUO consists of EU-notified lactic acid bacteria (homo and heterofermentative)

Concentration: 100 x 10⁹ CFU per g

Dosage recommendation

CAMsil DUO can be applied with every rate of dilution between 40 ml and 2 litre per ton of silage as far as 1 g **CAMsil DUO** per ton silage material is mixed in (100.000 CFU per g silage).

One bag (100 g) inoculates 100 ton of silage.

Packaging

Aluminium bag à 100 g net weight

General information

Storage at room temperature (≥ 20 °C)

Shelf life (unopened package) 18 month from production date at ≥ 20°C

Authorisation: The bacterial strains are registered at EFSA under the category 1k silage additives (EU-Registration-No. 1k20747, 1k21013) and is according to Regulation (EG) No.1829/2003 and 1830/2003 assuredly GMO-free.
